OLEDB 6.8A
Time&Billing 6.8A, 8.0A

Other Products

MS Office 97 - 2003
MS Windows 98, NT, 2000, XP

Enhancements and revisions in Adagio Payables 8.0A (2006.06.26)

- ◆ Supports Adagio BankRec multi-currency databases.
- ◆ Department fields in the Company Profile could not be saved in previous releases of 8.0A.
- ◆ The formatted address lines from the Bank printed the bank name instead of the address when printing blank checks.
- ◆ A filler field was not allowed in the "A" section of a manual check import batch template.
- ◆ The EFT file produced for TelPay® for Business included the vendor number in the Company Code when it should not have, causing newer versions of TelPay to reject the file.
- ◆ The hash total calculated for the TelPay for Business EFT file was incorrect in some cases, causing the file to be rejected.
- ◆ The MICR font has been adjusted slightly to improve readability by electronic equipment.
- ◆ The interface to Purple Cashbook for Adagio was not working on multi-currency databases for foreign bank accounts.
- ◆ A manual check applied to an invoice and a credit note transaction, with the credit note only partially applied, caused an integrity error to be reported after running Period End. The Rebuild did not correct this.
- ◆ In the manual check batch entry grid, if the vendor had enough transactions to fill the grid and the right hand slider bar appear, clicking the last line on the grid scrolled down when it should have selected the line.

Enhancements and revisions in earlier versions of Adagio Payables

- ◆ Refer to the Readme help file for details of enhancements and revisions in earlier versions.

Installing

To install Adagio Payables from the Adagio Product CD you need the serial number and install code from the Product Label that came with your CD.

If you are installing an upgrade, you need the serial number and install code from the Upgrade Product Label that came with your upgrade CD. A previous version of Adagio Payables should already be installed on your computer before installing the upgrade. If a previous version is not already installed, you can still install the upgrade. After entering the upgrade serial number and install code, you will also have to enter the serial number and install code from your original version.

If you are installing a Service Pack you do not need to enter a serial number or install code. However, a previous version of Adagio Payables 8.0A must be installed before the Service Pack can be installed.

over --

To install Adagio Payables (or an upgrade), insert the CD in the drive. If the install program does not start automatically, run ADAGIO.EXE from the root of the CD. Once the install program is running you can click the Help button for detailed instructions. If Adagio Payables is installed on a network, you must also do a workstation install for each workstation running Adagio Payables. Refer to the manual or "Installing on a network" in the Readme help for instructions.

To install the Adagio Payables Service Pack, run the Service Pack program and follow the instructions on the screen. After installing the Service Pack, and depending on the version you were running prior to installing it, a workstation install may be required at each station running Adagio Payables. To determine if a workstation install is required, start Adagio Payables at the station. The workstation install will be automatically started if required. Note: If you are updating multiple applications at the same time, it may be faster to run the all workstation install to update all applications at once on the station. Refer to "Installing on a Network" in the Readme for instructions.

Upgrading to this Version

Earlier versions of Adagio Payables must be converted for use with 8.0A. If you convert while a System Check is in progress, the System Check run that was in progress prior to converting to 8.0A will be cleared to allow the conversion to complete. You will need to recreate the run from the Print/Post Checks and Advices function.

Adagio Payables 8.0A requires Adagio MultiCurrency 8.0C or higher when used with a multi-currency database.

Note 1: Adagio Payables 8.0A requires Adagio Inventory 8.0A or higher and Adagio BankRec 8.0A or higher when used with a multi-currency database
