Adagio® Receivables Release Notes 6.8A (2002.06.10)

Enhancements and problems fixed in Adagio Receivables 6.8A (2002.06.10)

- ◆ Changes have been made for compatibility with Adagio Time&Billing. Adagio Receivables 6.8A (2002.06.10) is required for use with Adagio Time&Billing. Earlier versions of Adagio Receivables will open the database but should not be used.
- ◆ Enhancements have been made in the Data Integrity Checker. More types of phase 1 errors are detected and can be rebuilt. Files are compressed during rebuild by removing deleted records. This reduces the size of files and speeds up the integrity check. Progress is now shown during the time the program is checking the free list, which can be considerable for files with a large number of deleted records. These enhancements were made in the Adagio Data Source (ADS), and will be present in all Adagio applications when the updated ADS is installed by Adagio Receivables.
- ◆ Additional files are now checked in phase 1 of the Data Integrity Check.
- ◆ You are now able to set the tray / bin when printing statements.
- ◆ Statements were faxed to the wrong customer fax number in some cases when the fax queue was used. This was a timing problem on some machines and very rare.
- ◆ The specific printer selection for statements in File | Options was not being saved.
- ◆ Statements using a custom form size (for example 7 inch forms) were not printing correctly, resulting in the footer not being printed.
- ◆ When a custom form size was set in the statement designer, it would not be saved until you set it a second time.
- ◆ An error occurred while printing or previewing statements in the Designer if your printer driver had more than 64 different paper sizes.
- ◆ Purging posting journals deleted journals that were not in the range printed in some cases.
- ◆ The cash batch listing no longer shows the transaction type as 'Unapplied Payment' for miscellaneous receipts (no customer number).
- ◆ The error message "Error:524 Print job busy" occurred in some cases, on some machines, when printing posting journals to a file.
- ◆ If a posting journal with a GL summary was printed a second time in the same session, the error 'Unable to lock G/L distribution work file' was displayed.
- ◆ Invoices with all details equal to zero did not print on the Invoice Posting Journal. If all invoices in a batch had zero for all details, the message "Nothing to print" was displayed and therefore the posting journal could not be purged.
- ◆ Customer numbers using all capitol letters were truncated in some cases on some reports.
- ◆ Tax is now recalculated automatically when you edit an invoice and change the Distribution code on a detail.
- ◆ Customers with retainage transactions totaling zero can no longer be deleted.
- ◆ If a document was inadvertently entered with a date greater than year 2099 and posted, the Customer Transaction report would hang.
- ◆ If another application installed the Crystal Reports 8.5 print engine, there were intermittent problems printing reports on some machines.

-- over --

Enhancements and problems fixed in Adagio Receivables 6.8A (20011105)

- ◆ Sample invoice and cash batch import files, and associated import templates, have been included with the sample data. For further information see the Important Notes section in the Readme help.
- ◆ Import now displays an error if the date in the import file is null.
- ◆ Importing an invoice batch updated the discount due date although there were no discount terms for the Terms code.
- ◆ Posting an imported cash batch caused a data integrity error.
- ◆ An error occurred when printing reports to file on Windows 2000 machines.
- ◆ Some reports printed the company phone number instead of the customer phone number if customer numbers were unformatted.
- ◆ The error "[250] Can't open copy report definition [80030005] Access Denied" occurred when printing some reports on some Windows 2000 machines.
- ◆ After printing several reports, the printer name on report dialogs would be corrupt in some cases.
- ◆ The specific printer set in File | Options was not used when printing reports. The default printer was always used.

Enhancements and problems fixed in Adagio Receivables 6.8A (20010912)

- ◆ Specific printer selections in File | Options were not being saved. This has been corrected.
- ◆ An error occurred if you printed or previewed a specification in the designer and copies was greater than 1. This has been corrected.
- ◆ Faxing was not using 10 digit dialing rules correctly. It was putting a "1" in front of local 10 digit numbers. This has been corrected.

Enhancements and problems fixed in earlier versions of Adagio Receivables

- ◆ Refer to the Readme help file for details of enhancements and problems fixed in earlier versions.

Installing

To install Adagio Receivables from the Adagio Product CD, you need the serial number and install code from the Product Label that came with your CD.

If you are installing an upgrade, you need the serial number and install code from the Upgrade Product Label that came with your upgrade CD. A previous version of Adagio Receivables should already be installed on your computer before installing the upgrade. If a previous version is not already installed, you can still install the upgrade. After entering the upgrade serial number and install code, you will also have to enter the serial number and install code from your previous version.

If you are installing a Program Temporary Fix (PTF), you do not need to enter a serial number or install code. However, a previous version of Adagio Receivables 6.8A must be installed before the PTF can be installed.

To install Adagio Receivables (or an upgrade), run ADAGIO.EXE from the root of the CD. Once the install program is running, you can click the Help button for detailed instructions. If Adagio Receivables is installed on a network, you must also do a workstation install for each workstation running Adagio Receivables. Refer to the manual or help for workstation install instructions.

To install the Adagio Receivables PTF, run SETUP.EXE and follow the instructions on the screen. A workstation install is not required when installing the PTF.

If you are upgrading Adagio Receivables from version 6.5A or older, and you are using the Softline Multi-User Pack (MUP), it must be replaced by an Adagio Lanpak. Please contact your dealer or Softrak Systems for upgrade information. To avoid a reduction in the number of licenses available to run your applications, do not install the Adagio Receivables upgrade until you have received an Adagio Lanpak to replace your MUP. The method of licensing used by Adagio Lanpak is different than the MUP. Refer to the Adagio Receivables or Adagio Lanpak Readme help file for details.

Upgrading to this Version

There are no special instructions for upgrading to this version. A database conversion is not required. However, changes to your existing statement specifications may be required (see below). Note: Adagio Receivables does not support multi-currency. This version of Adagio Receivables is NOT compatible with Accounts Receivable 7.0A.

Converting Statement Specifications from previous versions

Adagio Receivables 6.8A includes a new version of the Statement Designer. In most cases statements will print correctly from specifications designed in earlier versions. However, we recommend specifications created in previous versions be converted before they are used in version 6.8A. To convert a specification, simply open it and save it in the designer. Minor adjustments may be required after the specification is converted, and we recommend you print test statements after installing Adagio Receivables 6.8A to ensure they are printing correctly.

When statement specifications are converted, the Autosize property is automatically turned off due to the conversion. Thus the specification may need to be edited. You may need to turn Autosize back on for any field where it was on prior to the conversion. To change the Autosize property, right mouse click on a field in the Designer and select Properties | Formats.

In some cases if the Page Size in a statement specification is set to 'Default', it may not print correctly in version 6.8A, depending on your printer settings in Windows. We recommend you change the setting to 'Letter 8 ½ x 11 in' (or other specific size as appropriate).

Note: Specifications created with Adagio Receivables 6.8A cannot be used with earlier versions of Adagio Receivables.

* **Note:** The compatibility information displayed at the top of this Release Note may only be as current as the actual release date (indicated in brackets after the version number). To get the most up-to-date compatibility information for this and other products, see the Compatibility Chart on Softrak's web site at www.softrak.com or contact your Softrak dealer or consultant.
