Other

UniDevCo Inventory Receipts 6.5A, 6.6A
Any product for which an Adagio Data
Dictionary has been created
MS Windows 98, NT, 2000, XP

Enhancements and revisions in Adagio GridView 8.0B (2004.08.30)

- ◆ A composite table "Adagio {Composite Tables 6.8B}" is installed with this version of GridView. This table can be used to define views that incorporate fields from related tables. For example, there is a table (SR Trans w Cust, Items) that was defined using the Sales Analysis transactions file with fields from the A/R Customer and I/C Item master. This would make it possible to define a Sales Report that included the Customer Name and Item Description.
- ◆ Added 3 new views to illustrate use of composite tables: AR Transactions with Customer Name.gv, GL Posted Transactions w Account Description.gv, and AP Transactions with Vendor Name.gv.
- ◆ The Toolbar requires resetting in this release. Select View | Customize, then on the Toolbars Tab in the Toolbars list box, select File and click Reset. A "Red Pen" will be added to the Menu Bar that you can use to add additional formatting to rows.
- ◆ Refresh of linked views will be much quicker in most cases.
- ◆ Excel Direct has been improved. For example, you may now export a selection and hidden rows are not exported.
- ◆ Columns can now be formatted, renamed, deleted and hidden from the View by using the Right Button on the Column Title.
- ◆ "Save Workspace As..." and "Save All" options have been added to the File menu.
- ◆ "Named Items" have been added which, when used in conjunction with the GetNamedItem function, provides greater flexibility when defining a View.
- ◆ Column Minimum, Maximum and Average have been added to Total and each have a different "highlight" style.
- ◆ Linked Views will attempt to match on "Column Name" if no other "index" was found.
- ◆ An optional parameter, to provide the initial value, has been added to QueryString, QueryNumber and QueryDate.
- ◆ QueryString, QueryNumber and QueryDate will remember the last value entered and use that as the default value.
- ◆ The Calendar used in QueryDate has been updated.
- ◆ A new DateString function has been added to give greater flexibility when formatting dates.
- ◆ Date formatting for MM/DD/YY has been fixed.
- ◆ Excel direct now transfers column and row formatting.

-- over --

- ◆ The number of decimals defined in the dictionary is now used when displaying numeric fields.
- ◆ Integer type fields such as Fiscal Period can now be used for summarizing.
- ◆ Using the Right Button on a Column Title now allows for complete control over the format of the column. The formatting information is now saved with the View
- ◆ View by rows now hides the underlying grid.
- ◆ Previously, if you cancelled a refresh and kept the records the Row and Column formatting was not performed, this has been fixed.
- ◆ The "View by Rows" has been added to the view definition
- ◆ Improvements have been made to the reporting of errors.
- ◆ Corrections were made to the functions Day(), Month(), and Year() which would sometimes return unexpected values.

Enhancements and revisions in earlier versions of Adagio GridView

- ◆ Refer to the Readme help file for details of enhancements and revisions in earlier versions.

Installing

To install Adagio GridView from the Adagio Product CD, you need the serial number and install code from the Product Label that came with your CD.

If you are installing an upgrade, you need the serial number and install code from the Upgrade Product Label that came with your upgrade CD. A previous version of Adagio GridView should already be installed on your computer before installing the upgrade. If a previous version is not already installed, you can still install the upgrade. After entering the upgrade serial number and install code, you will also have to enter the serial number and install code from your previous version.

If you are installing a Service Pack, you do not need to enter a serial number or install code. However, a previous version of Adagio GridView 8.0B must be installed before the Service Pack can be installed.

To install Adagio GridView (or an upgrade), insert the CD in the drive. If the install program does not start automatically, run ADAGIO.EXE from the root of the CD. Once the install program is running you can click the View button for detailed instructions in the Readme help. If Adagio GridView is installed on a network, you must also do a workstation install for each workstation running the product. Refer to the manual or Readme help for workstation install instructions.

To install the Adagio GridView Service Pack, run the Service Pack install program and follow the instructions on the screen. A workstation install is not required when installing the Service Pack.

Views and Workspace files created or modified with GridView 8.0B might not work with version 8.0A of GridView and cannot be used with version 6.8A. Views and Workspace files created with earlier versions of GridView can be used with GridView 8.0B.

Note: Adagio GridView is compatible with ACCPAC Plus multi-currency databases. The dictionaries for ACCPAC Plus Canadian and US Payrolls are not included with Adagio GridView for security reasons. However, they are available on request to registered users.
