Time&Billing 6.8A – 8.1B

### Other

Any product that uses the Adagio  
Data Source (ADS)  
MS Windows XP, Vista, 7

### Enhancements and revisions in Adagio Lanpak 9.0C (2010.06.23)

- ◆ Fully compatible with Windows 7.
- ◆ Compatible with and required by new versions of several Adagio modules.
- ◆ The version of the Adagio Data Source (ADS) installed allows for significant increases in the speed of functions in Adagio modules when data is on a network, including rebuilding file integrity errors in the Data Integrity Check, database conversion, View GL Entry in Ledger, printing statements in Receivables, deleting control accounts in Receivables, and more. It allows for new features in modules, including grid filters and uppercase master file lookup, such as customer and vendor name in Receivables and Payables, and item description in Inventory.

### Enhancements and revisions in earlier versions of Adagio Lanpak

- ◆ Refer to the Readme help file for details of enhancements and revisions in earlier versions.

### Installing

To install Adagio Lanpak you need the serial number and install code from the Product Label that came with your CD or from the download email sent to you by Softrak Systems.

If you are installing an upgrade, you need the serial number and install code that came with your upgrade. A previous version of Adagio Lanpak should already be installed on your computer before installing the upgrade. If a previous version is not already installed, you can still install the upgrade. After entering the upgrade serial number and install code, you will also have to enter the serial number and install code from a previous version.

To install Adagio Lanpak, insert the CD in the drive. If the install program does not start automatically, run ADAGIO.EXE from the root of the CD. Or, if Lanpak was downloaded, run the program file you downloaded. Once the install program is running you can click the View button for detailed instructions.

If Adagio is installed on a network, you must install the Lanpak to the network drive where the Adagio applications are installed.

**If you have installed a Client NFR (Not for Resale) version of Adagio Lanpak, you must uninstall it before installing a full product version.** Failure to do so will result a message saying you are running a NFR version, even if a full product version of the Lanpak is installed and licensed. If a full product version is already installed, use the selective uninstall program to uninstall just the NFR version. The selective uninstall found in `\softrak\system\lanpak\LanpakSelectiveUninstall.exe`.

Client NFR Lanpaks must not be installed if a full product version of Lanpak is already installed or the full Lanpak will expire.
