MS Windows 2000, XP, Vista

Enhancements and problems fixed in Adagio ODBC 9.0A (2008.07.31)

- ◆ Initial Release of Adagio ODBC.

Installing

To install Adagio ODBC you need the serial number and install code from the download email sent to you by Softtrak Systems.

To install Adagio ODBC run the program file you downloaded. Once the install program is running, you can click the View button to open the Readme file for detailed instructions. If Adagio ODBC is installed on a network, you must also do a workstation install for each workstation running Adagio ODBC. Refer to "Installing on a network" in the Readme for instructions.

Adagio ODBC 9.0A **requires Adagio Lanpak to be version 9.0A** or higher. New version or products require Lanpak to be at the currently shipping version. **You must install or upgrade to Lanpak 9.0A if you require multiple users in Adagio ODBC.** If you have any prior version Lanpaks installed but no 9.0A Lanpaks the Adagio ODBC install will warn you.

Adagio ODBC installs the Data Dictionary Exporter (DDE). DataDictionaryExporter.EXE is a utility program to export Adagio's database description (data dictionary) tables to Excel. A data dictionary describes the tables in a module and the files that contain the actual data. Run the DDE from Windows | Start | Programs | Adagio | ODBC | Data Dictionary Exporter.
