MS Office 97 - 2003
MS Windows 98-SE, NT, 2000, XP

Enhancements and revision in Adagio OrderEntry 8.0A (2005.06.23)

- ◆ After installing Adagio Inventory 8.0A, multiple users entering and posting orders in OE locked each other out in some cases. After editing an item in Adagio Inventory 8.0A, users were locked out of the item in other applications until they closed the Edit items grid screen.
- ◆ Invoice and Actual Ship date fields can now be edited on a zero dollar invoice.
- ◆ In some cases, an access violation error occurred when manually adding a serial number line.
- ◆ Copying an order for a customer with an alert now pops the alert.
- ◆ The customer tax status is now defaulted from the customer in all cases when the import file does not contain the customer tax status field.
- ◆ Entering an order for a customer with an alert, or editing a customer with an alert in OE, prevented other users from entering orders until the alert was cleared.
- ◆ The lost sales figure was incorrect if you edited an existing backorder and increased the quantity ordered.
- ◆ Starting OrderEntry (time the splash screen is visible) was slow on a network in some cases.

Enhancements and revisions in earlier versions of Adagio OrderEntry

- ◆ Refer to the Readme help file for details of enhancements and revisions in earlier versions.

Installing

To install Adagio OrderEntry from the Adagio Product CD, you need the serial number and install code from the Product Label that came with the CD.

If you are installing an upgrade, you need the serial number and install code from the Upgrade Product Label that came with your upgrade CD. A previous version of Adagio OrderEntry should already be installed on your computer before installing the upgrade. If a previous version is not already installed, you can still install the upgrade. After entering the upgrade serial number and install code, you will also have to enter the serial number and install code from your previous version.

If you are installing a Service Pack, you do not need to enter a serial number or install code. However, a previous version of Adagio OrderEntry 8.0A must be installed before the Service Pack can be installed.

To install Adagio OrderEntry (or an upgrade), insert the CD in the drive. If the install program does not start automatically, run ADAGIO.EXE from the root of the CD. Once the install program is running, you can click the View button to open the Readme file for detailed instructions. If Adagio OrderEntry is installed on a network, you must also do a workstation install for each workstation running Adagio OrderEntry. Refer to "Installing on a network" in the Readme for instructions.

-- over --

To install the Adagio OrderEntry Service Pack, run the Service Pack program and follow the instructions on the screen. After installing the Service Pack, a workstation install may be required at each station running Adagio OrderEntry. To determine if a workstation install is required, start Adagio OrderEntry at the workstation. The workstation install will be automatically started if required. Note: If you are updating multiple applications at the same time, it may be faster to run the all workstation install to update all applications at once on the station. Refer to "Installing on a Network" in the Readme for instructions.

Upgrading to this Version

Adagio Receivables 8.0A is required. Adagio OrderEntry 8.0A is not compatible with earlier versions of Adagio Receivables. **You must open your AR database at least once with Adagio Receivables 8.0A before opening your OE data with Adagio OrderEntry 8.0A.**

Adagio OrderEntry 8.0A requires Adagio MultiCurrency 8.0B or higher when used with a multi-currency database.

Adagio OrderEntry 8.0A requires Adagio Inventory 8.0A or higher when used with a multi-currency database.

When upgrading from previous versions of Adagio OrderEntry, if you had specific specifications selected in File | Options they must be must be reselected. To allow OrderEntry to run with multiple companies from the same workstation, the specific specifications are now stored by company rather than by workstation.

Adagio OrderEntry 8.0A converts import / export templates. Templates created by 8.0A cannot be used with earlier versions.

Sites running Adagio Multi-currency Lite wishing to convert to full multi-currency should contact their dealer or Softrak Systems for conversion information.
