Enhancements and problems fixed in Adagio ODBC-RW 9.1A (2013.12.18)

- ◆ Compatible with Adagio ODBC 9.1A.
- ◆ Supports 64-bit.
- ◆ The install supports UNC and writes to the master install log file.

Enhancements and revisions in earlier versions of Adagio ODBC

- ◆ Refer to the Readme help file for details of enhancements and revisions in earlier versions or [Historical Enhancements](#) under Products on Softrak's web site.

Installing

Adagio ODBC-RW is an Add-on product for Adagio ODBC. Adagio ODBC 9.1A must be installed before installing the ODBC-RW Add-on. Adagio ODBC-RW and Adagio ODBC must be at the same version.

To install Adagio ODBC-RW you need the serial number and install code from the download email sent to you by Softrak Systems.

To install Adagio ODBC-RW run the program file you downloaded. Once the install program is running, you can click the View button to open the Readme file for detailed instructions.

Adagio ODBC-RW does not include a workstation install and one is not required. If it is installed on a network, open its readme help, open the file AdagioODBCRWReadme.chm from the local folder C:\Softrak\ODBCV2.

Adagio ODBC-RW 9.1A **requires Adagio Lanpak to be version 9.0E** or higher. New versions of products require Lanpak to be at the currently shipping version. **You must install or upgrade to Lanpak 9.0E if you require multiple users in Adagio ODBC-RW.**

Adagio ODBC-RW is not certified to run in a live multi-user environment. Adagio Developer Partners should use the Adagio Data Source (ADS) to write to Adagio databases in a multi-user environment.

Upgrading to 9.1A Upgrade Complexity: **Easy** ●

There are no special considerations when upgrading to 9.1A.
